SUMMARY

Fullstack Engineer with 5+ years of experience building end-to-end web applications — from backend APIs and database design to frontend interfaces and cloud deployment. Currently focused on AI-powered SaaS products, with hands-on experience integrating LLM APIs (OpenAI, Claude) into production systems. Comfortable across the full stack (Python / NestJS / ReactJS) and experienced with AWS infrastructure, multi-tenant architecture, and ERP customization.

PROFESSIONAL SKILLS

Core Stacks : Python (Django, Odoo, FastAPI), JavaScript (NestJS, NodeJS, ReactJS)
AI / LLM : LLM API integration (OpenAI, Claude), AI-powered feature development
Databases : PostgreSQL, MySQL, SQL Server
Cloud & DevOps : AWS (EC2, RDS, S3), Docker, Nginx, Linux, Github Action Pipeline
Also Familiar : PHP (Laravel, CodeIgniter), C# (.NET 8), Odoo ERP

PROFESSIONAL EXPERIENCES

TRANSPORTECH.AI

Fullstack Engineer - Uni Emirate Arab (Remote Work)

11/2025 - present

- Multi-tenant Fleet Management SaaS platform built from the ground up using NestJS + ReactJS, supporting end-to-end fleet operations (Dispatch, HR, Finance, Fleet, Live Tracking) for multiple concurrent business clients.
- Built real-time GPS fleet-tracking and automated revenue reconciliation across third-party ride-hailing integrations (Uber, Bolt, Monic)
- Built a cross-platform (iOS/Android) driver mobile application, covering 56 screens across trip management, booking, driver onboarding/KYC, EV charging, and earnings/payroll.
- Integrated native device capabilities (camera-based document OCR, geolocation-based trip metering, QR-code vehicle handover, OneSignal push notifications) plus PWA offline support via Workbox and bilingual (EN/AR) localization.
- LLM API integration Implemented to add AI-powered assistant capabilities to the platform, enabling intelligent automation within fleet workflows.

PT SEMESTA ENERGI SERVICES

Software Engineer - South Jakarta (Remote Work)

11/2021 - 10/2025

- Developed and maintained an enterprise data consolidation platform integrating multiple external systems (including [Quintiq](#)) to reduce manual data handling and improve reporting consistency..
- Contributed to the backend development of an internal HRIS, improving data processing reliability and supporting HR automation initiatives.
- Customized and deployed Odoo ERP modules for project management, helping standardize workflows and improve cross-team coordination.
- Participated in AWS infrastructure optimization initiatives, contributing to cost efficiency through service configuration and resource usage improvements.

PT JASA PERALATAN PELABUHAN INDONESIA

Odoo Developer - South Jakarta

05/2021 - 10/2021

- Designed and implemented custom Odoo modules for employee management, inspections, document handling, and project administration.
- Automated several manual HR and inspection workflows by translating operational requirements into ERP-based solutions.
- Assisted in deploying backend services and server infrastructure for e-Tender and vendor management systems.

CIREBON UNITED MANAGEMENT

Backend Engineer - Cirebon

01/2020 - 08/2020

- Developed backend services for a CMS platform and corporate website to support structured content publishing and Built a registration management system to handle athlete and official registrations for regional leagues, improving data organization and submission flow.

ISLAMIC UNIVERSITY NAHDLATUL ULAMA

Backend Engineer - Cirebon

02/2018 - 03/2019

- Developed an academic information system supporting course management, student records, and grade processing and Automated key administrative workflows and enabled centralized academic data access for lecturers and staff.

EDUCATION

B.Sc. in Computer Science

2015 - 2020

Universitas Nahdlatul Ulama - Cirebon
